

Magnesium Rich Foods

Mineral Nutrition for Muscle and Nerve Function

Magnesium is an essential mineral involved in more than three hundred biochemical reactions in the body. It contributes to muscle and nerve function, blood glucose control, blood pressure regulation, and the structural development of bone. Most adults can meet their needs through a varied diet.

Role of Magnesium in the Body

Magnesium supports normal muscle contraction and relaxation, helps nerves carry signals, participates in energy production, and contributes to the synthesis of proteins. It also works alongside calcium and vitamin D in maintaining bone health.

Good Food Sources

Magnesium is found in a wide range of plant and animal foods. Pumpkin seeds are among the richest sources. Green leafy vegetables, whole grains, legumes, nuts, and dark chocolate also contribute meaningfully to daily intake.

Suggested Items:

- Pumpkin seeds - approximately 150 mg per ounce
- Cooked spinach - approximately 80 mg per cup
- Black beans - approximately 120 mg per cup
- Almonds - approximately 80 mg per ounce
- Dark chocolate (70 percent) - approximately 65 mg per ounce
- Brown rice - approximately 80 mg per cup cooked

Food	Magnesium (mg)	Serving
Pumpkin seeds	150	1 ounce
Spinach (cooked)	80	1 cup
Black beans	120	1 cup
Almonds	80	1 ounce
Brown rice	80	1 cup

Conclusion

Regular intake of magnesium-rich foods supports muscle and nerve function. People with restricted diets or certain medical conditions may need advice from a qualified professional.
